

## MULTITIMER Multifunction relay RK 7817

Translation  
of the original instructions

### Product Description

The multifunction timers RK 7817 in compact stepped front enclosures fulfills all the demands to modern time control devices. It completes the RK-timer range that covers with only a few single function variants all common timing functions, time ranges and voltage models. The multifunction relay offers 8 functions, simply selectable via rotary switch and time ranges between 0.02 s and 300h. Besides the standard 1 c/o contact also a second c/o contact or an instantaneous c/o contact is available as option. Therefore this multifunction timer is suitable to realize flexible, time depending controls in industry and building automation.

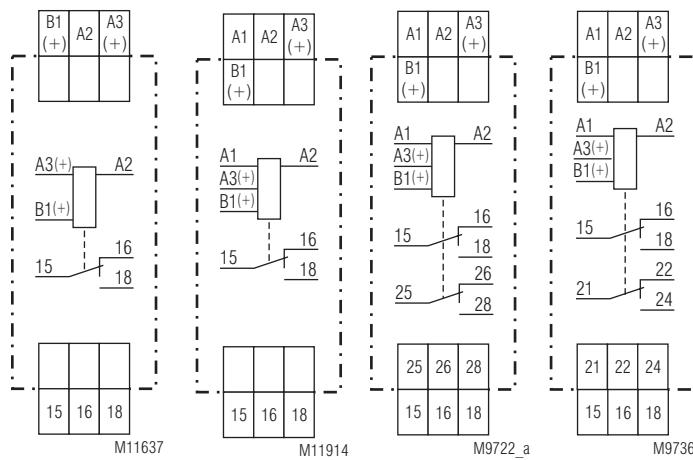

### Your Advantages

- Timers in compact design enclosures for consumer units
  - Multifunction relay RK 7817 with 8 functions and adjustment aid for quick setting of long times

### Features

- According to IEC/EN 61 812-1
- 8 time ranges adjustable from 0.02 s to 300 h via rotational switches
- Dual-voltage-version AC 230 V + AC/DC 24 V or AC 110 ... 127 V + AC/DC 24 V
- Single-voltage-version AC/DC 24 V or DC 12 V
- 1 changeover contact
- As option units with second changeover contact (only for voltage AC 230 V + AC/DC 24 )
  - On delayed
  - As instantaneous contact
- 8 functions via rotational switches adjustable:
  - Delay on energisation (AV)
  - Fleeting on make (EW)
  - Delayed pulse (IE)
  - Flasher, start with puls (BI)
  - Delay on de-energisation (RV)
  - Pulse forming function (IF)
  - Fleeting on break (AW)
  - Delay on energisation and de-energisation (AV / RV)
- With time interruption / time adding
- LED indicators for operation, contact position and time delay
- Width: 17.5 mm

**Notes for setting of the RK 7817**

**Function- and time range setting**

The function and time setting via rotary switches are enabled only when the auxiliary voltage is connected. Changing of these rotary switches while during operation does not take an effect

**Adjustment assistance**

The flashing period of the yellow LED is  $1 s \pm 4\%$  and can be used to adjust the time. Especially on the lower end of scale and for long times it is suitable as the multiplication factors between the different time ranges are exact without tolerance.

Example:

The required time is 40 min. It has to be adjusted within the range 3 ... 300 min. The time check takes too long as several timing cycles would be necessary for a precise value.

For faster adjustment the setting is made to 0.03 ... 3 min. On this range the potentiometer should be set to 0.4 min (= 24 sec). With the right potentiometer setting the LED must show 24 flashing cycles. After that the time range is switched over to 3 ... 300 min and the setting is complete.

**Time interruption / Time adding**

The timing cycle can be interrupted by controlling input B1 (+) with control voltage. Removing the control signal will continue the timing cycle (time addition).

**Control input B1**

The control input B1 (+) has to be supplied with voltage against A2 with the functions RV, IF, AW, AV / RV. The control signal could be the same as the auxiliary/control voltage of A1 and A3 or any other voltage between 12 and 240 V AC or DC. Operating a parallel load between B1 and A2 is also possible.

If with function IF the inputs A1 and B1 are controlled simultaneously a pulse with the adjusted length is started.
