

ZCoupling C2

Compact coupling relay with two change over contacts e.g. for the galvanical isolation of signals, contact reinforcement and signal conditioning.

- Two change over (SPDT) contacts each up to 8 A, 250V AC
- Compact housing - 17.5 mm width
- Signaling the switching state via front LED
- 35 mm DIN Rail (EN 60715 TH35)

Application

The coupling relay ZCoupling C2 is used for the galvanically isolated coupling of signals such as PLC outputs to the periphery.

The relay coil of the C2 is controlled via the terminals A1/A2 of the C2, whereby the two changeover contacts of the C2 are switched.

Connected encoder elements, such as PLC outputs, are optimally protected by the integrated protection circuit.

An LED embedded in the front signals the switching status of the coupling relay.
